

Startup Evaluation Report

Generated on: January 06, 2026

Feasibility Score

10/100

Executive Summary

The startup idea aims to develop an AI-powered system that predicts exact questions for university and competitive exams, leveraging past question papers, examiner psychology, and hidden academic signals.

Problem Statement

The startup aims to solve the problem of students struggling to prepare for exams due to uncertainty about the questions that will be asked.

Target Users

The target users are students preparing for university and competitive exams worldwide.

Market Potential

The market potential is significant, with millions of students worldwide taking exams every year.

Technical Feasibility

The idea relies on analyzing past question papers and examiner psychology, which is feasible using machine learning and natural language processing. However, predicting exact questions with certainty is scientifically impossible, and the idea may enable cheating or manipulation.

Innovation & Uniqueness

The idea combines existing technologies in a novel way, but the concept of predicting exact questions is not new and has been attempted before.

Risks & Challenges

The startup may face challenges in collecting and analyzing large datasets, ensuring data quality, and preventing cheating or manipulation.

Strengths

- Combines existing technologies in a novel way
- Significant market potential
- Potential to improve student outcomes

Weaknesses

- Scientifically impossible to predict exact questions
- May enable cheating or manipulation
- Requires large datasets and high-quality data

Improvement Suggestions

- Focus on providing general guidance and insights rather than exact predictions
- Implement measures to prevent cheating or manipulation
- Invest in data quality and collection

Final Recommendation

The startup idea has some potential, but it is essential to address the scientific impossibility of predicting exact questions and implement measures to prevent cheating or manipulation.
